Welcome

Welcome to dream-genie.ai — the all-in-one AI suite for WordPress. This guide will take you from zero to your first AI-generated content, a live chatbot, and a running workflow in under 15 minutes.

What you can do with dream-genie.ai:

- **AI Content Writer** — generate blog posts, emails, product descriptions with 60+ templates
- **AI Chatbot** — deploy a trained AI assistant on your website with RAG knowledge base
- **AI Flows** — automate workflows with a visual drag-and-drop builder (like Zapier, but native)
- **AI Media Studio** — generate images (DALL-E 3, SDXL, Imagen 4) and videos (Veo 3.1)
- **AI Forms** — build forms that provide instant AI-powered responses to visitors
- **MCP Server** — let AI agents (Claude, Cursor) manage your WordPress through conversation

■ **TIP:** dream-genie.ai includes a generous Free tier: chatbot (100 msgs/mo), flows (3 flows, 50 runs/mo), MCP server (4 tools), webhooks, analytics, and unlimited content generation. No credit card required.

2

Installation

Requirements

Requirement	Minimum	Recommended
WordPress	6.2	6.7+
PHP	7.4	8.1+
MySQL / MariaDB	5.7 / 10.3	8.0 / 10.6+
Memory Limit	128 MB	256 MB+
HTTPS	Required for chatbot voice	Required

Install from WordPress.org

1. In your WordPress admin, go to **Plugins** → **Add New**.
2. Search for **dream-genie.ai**.
3. Click **Install Now**, then **Activate**.
4. The dream-genie.ai menu appears in your admin sidebar.

Install from ZIP

1. Download the ZIP file from dream-genie.ai or your purchase email.
2. Go to **Plugins** → **Add New** → **Upload Plugin**.
3. Choose the ZIP file and click **Install Now**.
4. Click **Activate**.

■ **NOTE:** On activation, dream-genie.ai creates its database tables automatically. If you see a 'table not found' error, deactivate and reactivate the plugin.

3

Adding Your First API Key

dream-genie.ai uses your own API keys — you pay your AI provider directly at their rates. You need at least one key to get started.

1. Navigate to **dream-genie.ai** → **Settings**.
2. Find the **API Keys** section at the top of the page.
3. Choose your preferred provider and paste your key:

Provider	Where to Get a Key	Cost
OpenAI	platform.openai.com/api-keys	Pay-per-use (starts ~\$5 credit)
Anthropic	console.anthropic.com	Pay-per-use
Google Gemini	aistudio.google.com/apikey	Free tier available
OpenRouter	openrouter.ai/keys	Pay-per-use (multiple models)
Stability AI	platform.stability.ai/account/keys	Pay-per-use (images only)

1. Click **Save Settings**.
2. A green checkmark appears next to configured providers.

■ **TIP:** Recommendation: Start with **Google Gemini** — it has a generous free tier so you can try everything without spending money. Add OpenAI or Anthropic later for premium quality.

4

Generate Your First Content

Time: ~2 minutes

1. Go to **dream-genie.ai** → **AI Writer**.
2. Click the **Blog Post** template (under the Blog category tab).
3. In the **Topic** field, type: *5 Ways AI is Changing Small Business in 2026*
4. Leave Provider/Model on their defaults (or select your preferred one).
5. Click **Generate** (or press **Ctrl+Enter**).
6. Wait 5–15 seconds. The generated article appears in the right panel.
7. Review the content. Notice the **Flesch-Kincaid readability score** and **word count** at the bottom.
8. Click **Insert as Post** to create a WordPress draft, or **Copy** to paste elsewhere.

What just happened:

- The template's system prompt instructed the AI to write as an expert blogger
- Your topic was injected into the template's user prompt
- The AI generated a full blog post with headings, paragraphs, and a conclusion
- The result was saved to your generation history automatically
- If you clicked Insert as Post, a WordPress draft was created with Gutenberg blocks

■ **TIP:** Try other templates! Click different category tabs — Email, E-Commerce, Social Media, SEO — to see the full range of 60+ templates.

5 Deploy a Chatbot

Time: ~3 minutes

1. Go to [dream-genie.ai](#) → **Chatbot**.
2. In the **Behavior** tab, write a system prompt. Example:
You are a helpful assistant for [Your Company]. You answer questions about our products and services. Be friendly, concise, and professional. Our business hours are Mon–Fri 9am–5pm.
3. In the **Appearance** tab, set your **brand color**, **bot name**, and **welcome message**.
4. In the **Knowledge Base** tab, click **Add Source** and select 2–3 of your most important pages (FAQ, About Us, Pricing). The plugin will index them for RAG.
5. Toggle **Enable Chatbot** to ON.
6. Visit your site's frontend. The chat widget appears in the bottom-right corner.
7. Type a question that's answered by your training pages. The bot should respond with relevant, accurate information.

Quick Customizations:

- **Conversation Starters** — add 3–4 suggested questions that appear as clickable chips
- **Lead Capture** — enable to collect visitor name/email before or during chat
- **Pages** — restrict the widget to specific pages (e.g., only on product pages)

■ **NOTE:** Free tier includes 100 chatbot messages per month. Upgrade to Starter or higher for unlimited messages.

6

Create Your First AI Flow

Time: ~3 minutes

Let's build a simple flow: when a new blog post is published, AI generates a tweet about it.

1. Go to **dream-genie.ai** → **AI Flows** and click **Create New Flow**.
2. Name it: *Auto-Tweet on Publish*.
3. The flow builder opens with an empty canvas. Click **Add Trigger**.
4. Select **Post Published**. Configure: Post Type = Post, Status = Publish.
5. Click **+ Add Action** and select **AI Generate Content**.
6. In the action settings, set the prompt to:
*Write an engaging tweet (max 280 characters) about this blog post. Title: {{trigger.post_title}}.
Include 2 relevant hashtags.*
7. Connect the trigger's output to the action's input (drag from the output port to the input port).
8. Click **Save**, then toggle the flow to **Active**.
9. Publish a test blog post. Check the flow's **Execution Log** — you'll see the AI-generated tweet.

Taking it further:

- Add an **HTTP Webhook Out** action to actually post the tweet via Twitter's API
- Add a **Conditional** node to only tweet posts in certain categories
- Use the **AI Translate** action to generate tweets in multiple languages

7 Generate an Image

Time: ~1 minute

1. Go to **dream-genie.ai** → **AI Media Studio**. The Images tab is selected by default.
2. Type a prompt: *A cozy coffee shop interior with warm lighting, plants on shelves, and a laptop on a wooden table, photorealistic, 8K*
3. Select your provider (OpenAI / Stability AI / Gemini).
4. Choose a size: **Landscape** (great for blog headers).
5. Optionally select an art style preset (e.g., **Photorealistic**).
6. Click **Generate**.
7. The image appears in 5–15 seconds. Click **Save to Media Library** to keep it.

■ **TIP:** Image generation costs ~\$0.03–0.08 per image depending on provider and quality. Google Gemini (Imagen) has a free tier — great for trying things out.

8

Generate a Video

Time: ~2 minutes (plus ~90 seconds generation time)

Requires: Pro or Agency license + Google Gemini API key.

1. In AI Media Studio, click the **Video** tab.
2. Type a prompt: *A drone flyover of a tropical beach at golden hour, waves gently crashing, palm trees swaying, cinematic 4K with relaxing ambient music*
3. Select model: **Veo 3.1** (includes native audio).
4. Set aspect ratio: **16:9** and duration: **8 seconds**.
5. Click **Generate Video**.
6. Wait 60–120 seconds. The progress bar shows status.
7. When complete, the video auto-plays in the result panel with audio.
8. Click **Download** or view in **Media Library**.

■ **NOTE:** Veo 3.1 generates native audio — dialogue, sound effects, and music — automatically based on your prompt. No separate audio step needed.

9

Build an AI Form

Time: ~3 minutes

Let's build a recipe generator form.

1. Go to dream-genie.ai → **AI Forms** and click **Create New Form**.
2. Name it: *Recipe Generator*.
3. Drag a **Textarea** field onto the canvas. Label: *What ingredients do you have?* Field name: `ingredients`.
4. Drag a **Select** field. Label: *Cuisine type*. Options: Italian, Mexican, Asian, Indian, Mediterranean. Field name: `cuisine`.
5. Drag a **Number** field. Label: *Servings*. Default: 4. Field name: `servings`.
6. Click the **AI Response** tab. Set the prompt:
Create a delicious {cuisine} recipe for {servings} people using these ingredients: {ingredients}. Include prep time, cook time, ingredients list with measurements, and step-by-step instructions.
7. Click **Save**.
8. Copy the shortcode (e.g., `[dreamgenie_form id="5"]`) and paste it into any page.
9. Visit the page, fill in the form, and submit. An AI-generated recipe appears instantly.

10

Connect via MCP

Time: ~2 minutes

Let Claude Desktop (or Cursor, or any MCP-compatible AI agent) manage your WordPress site.

1. Go to dream-genie.ai → **MCP Server**.
2. Copy your **MCP Endpoint URL**.
3. Click **Generate API Key**. Name it (e.g., 'Claude Desktop'). Copy the key.
4. In Claude Desktop: Settings → Developer → MCP Servers → Add Server.
5. Paste the endpoint URL and API key.
6. Start a conversation with Claude: *'List my 5 most recent blog posts.'*
7. Claude will call your WordPress MCP server and return the results.

Things you can ask Claude to do:

- 'Create a draft blog post about AI trends in 2026'
- 'What plugins are currently active on my site?'
- 'Show me WooCommerce orders from last week over \$50'
- 'Update the About Us page with this new paragraph: ...'
- 'What's my site's current PHP version and WordPress version?'

■ **NOTE:** Free tier includes 4 read-only MCP tools. Upgrade to Starter for write access (create/update posts), or Pro/Agency for full WooCommerce and admin tools.

11

Plans & Limits

dream-genie.ai uses a graduated tier system. Every feature has a Free level.

Feature	Free	Starter	Pro	Agency
AI Writer	Unlimited	Unlimited	Unlimited	Unlimited
Chatbot	100 msgs/mo	Unlimited	Unlimited	Unlimited
AI Flows	3 flows, 50 runs	10 / 500	50 / 5,000	Unlimited
MCP Server	4 read tools	6 tools	All tools	All + query_db
Image Generation	Unlimited	Unlimited	Unlimited	Unlimited
Video Generation	—	—	✓	✓
AI Forms	Unlimited	Unlimited	Unlimited	Unlimited
Voice Chat	—	✓	✓	✓
Multi-Channel	—	—	—	✓
Multi-Bot	—	—	—	✓
White Label	—	—	—	✓
Webhooks	1 / 3 events	5 / all	Unlimited	Unlimited
Analytics	Basic totals	+Per-mod el	+Trends/e xport	All

■ **NOTE:** You pay for your API provider usage separately. dream-genie.ai license fees cover the plugin features — not the AI API calls. This means even the Free tier is genuinely useful.

12

Dashboard Overview

The main dashboard (dream-genie.ai → Dashboard) gives you an at-a-glance view:

Widget	Shows
Usage Stats	Total generations, tokens used, API cost estimate this month
Module Status	Which modules are enabled/disabled with quick toggles
Recent Activity	Last 10 generations, flow runs, and chatbot conversations
Quick Actions	Buttons: New Content, New Flow, Open Chatbot, Media Studio
Top Templates	Most-used content templates (from your history)
Cron Health	Whether WP-Cron is running, last execution, overdue jobs
System Info	WordPress version, PHP version, memory limit, active plugins
Token Analytics	Per-provider and per-model token usage charts

13 Where to Go Next

Now that you've completed the quick start, dive deeper into the features that matter most to you:

If you want to...	Read this manual
Master content generation with all 60+ templates	AI Content Writer & Templates
Build a smart chatbot with RAG and voice	AI Chatbot
Automate workflows and connect to SaaS apps	AI Flows & Automation
Let Claude manage your WordPress via MCP	MCP Server & Client
Build forms with instant AI responses	AI Forms Builder
Master image and video generation	AI Media Studio

Daily Habits for Success

- Generate at least one piece of content per day to build your content library
- Review chatbot conversations weekly to improve the knowledge base
- Build one new flow per week to automate repetitive tasks
- Add new training sources to the chatbot whenever you publish important pages
- Check the Token Analytics dashboard monthly to optimize API costs

14 Getting Help

Support Channels

Channel	Best For	Response Time
WordPress.org Forum	General questions, bug reports	Within 24 hours
dream-genie.ai/support	License and account issues	Within 12 hours
GitHub Issues	Bug reports with reproduction steps	Within 48 hours
Discord Community	Quick questions, tips, showcase	Community-driven

When Reporting Issues

Please include:

- WordPress version (found in Dashboard → Updates)
- PHP version (found in [dream-genie.ai](#) → Dashboard → System Info)
- Plugin version (found in Plugins page)
- The exact error message (screenshot or copy-paste)
- Steps to reproduce the issue
- Which AI provider and model you're using

■ **TIP:** Thank you for choosing [dream-genie.ai](#)! We're a small team passionate about bringing AI to every WordPress site. Your feedback shapes the product — don't hesitate to reach out.
